

Abdul Hanan Mohil

Software Engineer

Lahore, Pakistan • +92 317 4236593 • ahmohil78@gmail.com • linkedin.com/in/ahmohil

SUMMARY

Product-minded software engineer with 3 years of experience building scalable applications and shipping high-impact features. I take ownership of the code I write and constantly look for ways to remove friction for my team. Currently driving the Micro-Frontend (MFE) architecture migration and core platform tools at Motive.

EXPERIENCE

Motive • Software Engineer, Frontend Platform Feb 2025 – Present • San Francisco (Remote)

- **Leading the migration of the Motive dashboard** from a single-page app to a Micro-Frontend (MFE) architecture using Module Federation to speed up development and deployments.
- **Built the core localization formatters** using the browser's native Intl API, enabling accurate currency, number, and date formatting across 26+ locales (BCP47 tags).
- **Architected and developed over 20 reusable components** for the internal UI library that now serve as the foundational building blocks for the dashboard.
- **Built and launched the OmniSearch filter**, which now serves as the primary search tool across the entire platform.
- **Automated repetitive refactoring** by building custom scripts and Claude skills to handle tedious work, like finding and replacing old formatters across the codebase and auto-fixing unit tests.
- **Built an internal DOM-scanning tool** that highlights design system violations in different colors, helping QA and Design easily spot visual drift and keep the UI uniform.
- **Created a one-click local setup script** that lets Product, QA, and Design teams use Claude Code to safely make minor UI or text changes, test them locally, and open PRs without needing a developer.

Texagon • Software Engineer Oct 2024 – Jan 2025 • Lahore, Pakistan

- **Architected a scalable, multi-tenant backend** using Node.js, TypeScript, and Supabase, designing a database schema that enforced strict data isolation and security across multiple client organizations.
- **Engineered a multi-modal AI training pipeline** that processed text, images, and video into rich vector embeddings to power context-aware chatbots using RAG workflows.
- **Designed RESTful APIs with strict type safety** and built session management tools that allowed clients to seamlessly integrate these AI agents into their own third-party websites.

Lunivate • Software Engineer (Contract) Jul 2024 – Oct 2024 • Austin, TX (Remote)

- **Engineered a two-sided healthcare marketplace** connecting therapists with staffing agencies, featuring a custom analytics dashboard for real-time performance tracking.

- **Built an automated ingestion pipeline using n8n** that intercepted email-based service requests, parsed the payloads, and triggered backend APIs to instantly provision jobs, removing manual administrative bottlenecks.
- **Led the end-to-end development of the platform's cross-platform mobile application** using Flutter.

Metadots • Associate Software Engineer

Dec 2023 – Jul 2024 • Lahore, Pakistan

- **Developed a scalable "Repair-as-a-Service" marketplace** featuring integrated payment gateways and a dynamic service request system that routed users directly to local technicians.
- **Increased platform engagement by 30%** by engineering and launching features that supported home pickup and on-site repair options.
- **Built a production-grade AI onboarding assistant and medical chatbot** using LangChain, Pinecone, and OpenAI, enabling users to query complex account data using natural language.

PROJECTS

ChatBuddy — React, TypeScript, Node.js, LangChain. Built a custom platform that lets users train AI chatbots on their own data.

WorkOnIt — Node.js, OpenAI, Multi-Agent Systems. Architected an orchestration layer for a multi-agent system, allowing specialized AI agents to collaborate and execute complex workflows.

SKILLS

Frontend: TypeScript, React, JavaScript, Angular, RxJS, HTML, SCSS, Tailwind CSS

Testing: Playwright (E2E), Jest, Storybook, Visual Regression Testing

AI-Powered Development: Cursor, Claude Code, Atlassian MCP, Figma MCP, Chrome Dev tools.

Backend: Node.js, NestJS, PostgreSQL

AI / Data: LangChain, Pinecone, RAG, Multi-Agent Systems

Tooling: Git, Azure, Railway

EDUCATION & CERTIFICATIONS

B.S. Computer Science, University of the Punjab

July 2024

Certifications:

- Meta Front-End Developer Specialization (Coursera)
- Supervised Machine Learning, Stanford / DeepLearning.AI
